

3rd Indo German Conference On Sustainability In Engineering: Sustainable Engineering for a Greener Future

The 3rd Indo German Conference On Sustainability In Engineering was held in New Delhi, India from October 14-16, 2019. The conference was organized by the Indian Institute of Technology Delhi (IIT Delhi) and the Technical University of Munich (TUM). The conference brought together experts from India and Germany to discuss the latest advances in sustainable engineering.

Enhancing Future Skills and Entrepreneurship: 3rd Indo-German Conference on Sustainability in Engineering (Sustainable Production, Life Cycle Engineering and Management)

The conference covered a wide range of topics, including:

- Renewable energy

- Energy efficiency
- Water management
- Waste management

The conference also featured a number of keynote speeches from leading experts in the field of sustainable engineering. The keynote speakers included:

- Dr. R.K. Pachauri, former Chairman of the Intergovernmental Panel on Climate Change (IPCC)
- Dr. Klaus Töpfer, former Executive Director of the United Nations Environment Programme (UNEP)
- Dr. Ashok Chawla, former Chairman of the National Stock Exchange of India (NSE)

The conference was a great success and provided a valuable platform for experts from India and Germany to share their knowledge and expertise in the field of sustainable engineering. The conference also helped to strengthen the ties between India and Germany in the area of research and development.

Sustainable Engineering for a Greener Future

Sustainable engineering is the practice of designing and building products and systems that are environmentally friendly and energy efficient.

Sustainable engineering can help to reduce our impact on the environment and create a more sustainable future for our planet.

There are many different ways to practice sustainable engineering. Some examples include:

- Using renewable energy sources, such as solar and wind power
- Improving energy efficiency in buildings and transportation
- Developing new methods for water conservation and wastewater treatment
- Designing products that are recyclable and reusable

Sustainable engineering is an important field of study for the future. As the world's population grows and the demand for energy and resources increases, it is essential that we find new ways to live sustainably.

Sustainable engineering can help us to create a more sustainable future for our planet and for future generations.
